SUMMARY

Digital Business Technology student with hands-on experience in software development, SQL optimization, and enterprise IT support. Experienced in developing internal tools using Python, FastAPI, C#, and Microsoft SQL Server. Interested in Backend Development, Software Engineering, and Data Engineering, with a passion for building scalable and efficient systems.

WORK EXPERIENCE

Trainee Software support Engineer - IT System Store Service Unit | gosoft (thailand) co. ltd **Oct 2024 - Present**

- Resolved incidents in the Mobile Service Ordering Service reported by the Helpdesk and performed troubleshooting according to the reported issues.
- Developed SQL Query scripts for the Mobile Service Ordering Service.
- Developed tools for use within the Unit Stack, utilizing Python, FastAPI, and C# .NET Core.
- Maintained the local server database using Microsoft SQL Server, Azure Data, AWS and HeidiSQL Cloud.
- Support the back-end system of "7-Eleven" in the "CP ALL group"
- Check the system operation and check the database to support 7-Eleven stores

EDUCATION

Digital and Information Technology Program – Faculty of Engineering, PIM **June 2026 - Present**

- Computer Science major

Digital Business Technology **Oct 2024 - Mar 2026**

Kalasin Vocational college

- focuses on digital technologies, software development, data analytics, and information systems to support and improve modern business operations.
- focuses on programming, database management, business information systems, and the application of computer technology to support organizational and business processes.

Business Computer **May 2021 - Mach 2023**

Kalasin Vocational college

ADDITIONAL INFORMATION

TECHNICAL SKILLS

Backend	Database	Cloud	Tools
FastAPI	Microsoft SQL Server	AWS	Git
REST API	PostgreSQL	AWS Athena	VS Code
	SQL Optimization	Azure	Azure Data Studio
	Stored Procedures		Microsoft Office
			Power automate

Python
T-SQL
C#
Javascript

Framework

.NET Core, React, Vite.js
Micro Frameworks / API Frameworks

AI DEVELOPMENT & PRODUCTIVITY

- AI-assisted software development using Cursor IDE, Windsurf IDE, GitHub Copilot, ChatGPT, Claude, Gemini, and Microsoft Copilot.
- Experienced in prompt engineering, code generation, debugging, refactoring, documentation, and technical research using Generative AI.

AI DEVELOPMENT TOOLS

- GitHub Copilot
- Cursor IDE
- Windsurf IDE
- Visual Studio Code (AI Extensions)
- ChatGPT
- Claude
- Google Gemini
- Microsoft Copilot
- Perplexity AI

PROJECT

Automation Query SQL

Enterprise Inventory Analysis System
Microsoft SQL Server • T-SQL

- Designed and implemented a comprehensive inventory reconciliation engine for enterprise store operations.
- Consolidated inventory transactions from multiple business modules into a single analytical workflow.
- Built advanced T-SQL logic utilizing CTEs, temporary tables, table variables, and CROSS APPLY for inventory movement calculations.
- Automated inventory balance calculations using Audit, Adjustments, Sales, Transfers, Returns, Receipts, and Issue transactions.
- Reduced Helpdesk investigation time by providing a unified inventory analysis report.

GENTSTORE

Enterprise Database and application Management System
C#, WinForms (.NET Framework 4.8), WebView2, HTML, CSS, JavaScript, T-SQL, Microsoft SQL Server

- Developed a Windows desktop application with an embedded WebView2 interface for SQL script management and store support operations.
- Designed a JavaScript ↔ C# bridge to enable seamless communication between the web-based UI and native WinForms application.
- Implemented SQL script management features, including loading, previewing, and removing SQL files.
- Built inventory analysis and store support workflows to improve Helpdesk troubleshooting and operational efficiency.
- Developed UI self-diagnostics to validate CSS, JavaScript, and bridge functionality for application stability.
- Designed the application with modular architecture and enterprise-oriented documentation for maintainability and future enhancements.

PROJECT

GOSOFT IT & Best Practices 2026

Popular Vote Award – Track B: Engineering & Platform

- Presented a project to improve the efficiency of the nationwide store inspection system.
- Proposed process improvements to enhance system performance and operational efficiency.
- Received the Popular Vote Award in the Engineering & Platform track.
